Outside Equipment

Radio Antenna

Height: 1 to 10 ft. / .30 to 3.04 meters

-OR-

GTECH Satellite Dish

Diameter: 3 ft. 11 1/4 in. / 1.2 meters

Height: 6 ft. 6 3/4 in. / 2 meters

Weight: 100 to 700 lbs. installed, including weights

Whether your store receives a satellite dish or a radio antenna will depend on your location.

Installation of a dish or antenna may require access to the roof of your building. If you know of any roof weight restrictions at your location, please inform the Lottery prior to the installation date.

Non-penetrating roof mounts will be used to secure the dish or antenna whenever possible. Existing holes will be used for cables whenever possible.

FREQUENTLY ASKED QUESTIONS

Q What type of communications equipment will enable me to sell Florida Lottery products?

A GTECH will provide you with wireless communications equipment which will provide a direct link to the Lottery's processing center.

Q What is the cost of equipment and maintenance to retailers?

A All equipment and maintenance is provided at no charge. The Florida Lottery charges a weekly service fee of \$10.

Q What about training?

A GTECH and the Florida Lottery will provide all the training you and your staff will need to be a successful Florida Lottery retailer. GTECH will provide training on the operation of the terminal. The Lottery will provide training on accounting procedures, ticket inventory control and retailer responsibilities.

Q Who will be responsible for the installation of the communications equipment?

A GTECH Corporation, partner of the Florida Lottery, will be responsible.

Q What do Lottery retailers need to do to prepare for the installation of the communications equipment?

A Retailers need to provide counter space and power outlets for the terminal and peripherals.

Q How will the equipment be installed and what modifications will be made at my location?

A **STEP I**
GTECH may need to gain roof access at your location to determine the best placement for the outdoor equipment.

STEP II
GTECH will mount and secure the communications equipment. No holes will be drilled into the roof during a standard installation. If a hole must be drilled, permission will be obtained.

STEP III
Cabling will be used to connect the outdoor wireless equipment through an existing point of entry to a receiver mounted inside.

Q If I don't want a dish or other hardware on the roof, can I choose another site for them to be installed?

A GTECH will identify the most appropriate installation site for your location.

Q What if damage occurs to my location during the installation process?

A GTECH is fully insured to cover the installation process or any damage caused by the equipment. A certificate of insurance is provided to each new retail location prior to the installation.
